

ECE9400

THE UNIVERSITY OF WESTERN ONTARIO
FACULTY OF ENGINEERING

DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

ECE9400A – FLEXIBLE AC TRANSMISSION SYSTEMS (FACTS)

COURSE OUTLINE – Fall 2011

(M.E.Sc. & Ph.D. ONLY)

OBJECTIVE:

This course will introduce students to the transmission challenges of emerging modern electrical power systems. The course will present the basic concepts, principles and operation of fast high power electronic controllers known as Flexible AC Transmission Systems (FACTS) that enhance power system stability, and effectively increase transmission capacity thus yielding significantly higher flexibility of operation.

CONTACT HOURS: 3 lecture hours/week, half course

The initial meeting for this course will be held place on September 9, 2011 @ 3:00PM (Room TEB 234). The time for the further classes will be chosen to accommodate schedule of as many students interested in the course as possible. The final schedule is Thursdays 4:00-7:00PM in EC2130 from September 15 - December 1). Similar consensus arrangements will be made for the midterm and the final examination.

ANTIREQUISITE: None

PREREQUISITES: Bachelor's degree in Electrical Engineering. An undergraduate course in power electronics is desirable.

COURSE CONTENT:

- Introduction to emerging transmission networks
- Reactive power control in transmission systems
- Principles of Thyristor-based FACTS Controllers
- Static Var Compensator (SVC) Control Components and Models
- Concepts of voltage control by Static Var Compensator
- Applications of Static Var Compensator
- Thyristor Controlled Series Capacitor (TCSC)
- Applications of Thyristor Controlled Series Capacitor
- Principles of Voltage Source Converter (VSC) Based FACTS Controllers
- Applications of Voltage Source Converter (VSC) Based FACTS Controllers
- Coordination and Placement of FACTS Controllers

SPECIFIC LEARNING OBJECTIVES:

- 1) To introduce the operating principles, control systems and modeling of different FACTS Controllers
- 2) To understand the influence of measurement systems, network resonances and harmonic interactions on the performance of FACTS control systems

- 3) To provide the techniques of FACTS controller design for enhancing power transfer, stability and damping, mitigating sub-synchronous resonances, preventing voltage instability, etc.
- 4) To understand the interactions amongst various FACTS Controllers and techniques for their coordination and placement

TEXTBOOK:

PROJECT AND ORAL PRESENTATION:

The students in the course will be required to perform a computer simulation project on an assigned topic related to FACTS Controller application and make an oral presentation along with the project-report submission.

EVALUATION:

For the purpose of evaluation, the course is divided into three components, namely

- a. project - report and oral presentation
- b. mid term examination
- c. final examination

The final course grade will be determined from students' performance in the project, the mid term examination and the final examination. Both the mid term and final examinations will be of two hours duration, each. The mid term exam examination will be conducted approximately in the middle of the term. The examinations shall be semi-open book; calculators and formula sheets will be allowed.

In order to pass the course, a student must obtain a passing grade in each component. A student who fails either component shall receive a final grade not greater than 48%. The weighting of each of these components will be as follows:

Component	Value	Maximum Penalties*	
		English	Presentation
Project: Report and Presentation	50%	10%	10%
Mid Term Examination	25%	10%	10%
Final Examination	25%	10%	10%

*In accordance with the policy of the University, the grade assigned to all written and oral work presented in English shall take into account syntax, diction, grammar and spelling. In the professional life of an engineer, the manner in which oral and written communications are presented is extremely important. An engineering student must develop these skills as an integral part of the undergraduate program. To encourage the student to do so, the grades assigned to all written and oral work will take into account all aspects of presentation including conciseness, organization, neatness, use of headings, and the preparation and use of tables and figures.

All work will be marked first for content after which a penalty not to exceed the maximum shown above may be applied for lack of proficiency in English and/or presentation.

ATTENDANCE:

Any student, who in the opinion of the instructor is absent too frequently from class in this course, will be reported to the Dean (after due warning has been given). On the recommendation of the Department concerned, and with the permission of the Dean, the student will be debarred from taking the regular examination in the course.

CHEATING:

University policy states that cheating is a scholastic offence. The commission of a scholastic offence is attended by academic penalties that might include expulsion from the program. If you are caught cheating, there will be no second warning.

PLAGIARISM:

University policy states that cheating, including plagiarism, is a scholastic offence. The commission of a scholastic offence is attended by academic penalties that might include expulsion from the program. If you are caught cheating, there will be no second warning. (See Scholastic Offence Policy in the Western Academic Calendar).

Please contact the course instructor if you require material in an alternate format or if any other arrangements can make this course more accessible to you. You may also wish to contact Services for Students with Disabilities (SSD) at 661-2111 X 82147 for any specific question regarding an accommodation.
