

2018-2019

BONE AND JOINT INSTITUTE  
SEMINAR SERIES

**Amanda MacLeod, MD**

Assistant Professor  
Departments of Immunology & Dermatology  
Duke University Medical Center

***‘Innate Antimicrobial Immunity in  
Wound Healing and Repair’***

Skin forms a first line of defense and protects us against injuries and pathogenic infections. Following breaching of the skin barrier due to accidental or surgical trauma, the body is at risk to become invaded by pathogens. Human skin has a delicate innate immune system that establishes a natural antimicrobial defense system and this innate immune response is critical to unperturbed wound healing and preventing systemic infection

**DATE:** Tuesday April 16

**TIME:** 10:30 am

**LOCATION:** LHSC-UH Aud A

All interested members of the University Community are welcome!  
Please contact the program if you require information in an alternate format,  
or if any other arrangements can make this event accessible to you.
