

Western University  
Department of Mechanical & Materials Engineering

**MME 4487a — Mechatronic System Design**

**COURSE OUTLINE 2025–2026**

**CALENDAR**

**DESCRIPTION:**

An overview of electrical, mechanical, optical, and control technologies for system integration. Topics include: intelligent products and processes; design methodology; system modeling; sensors and actuators; microcontrollers; knowledge-based control.

**INSTRUCTOR**

**INFORMATION:**

Michael D. Naish, PhD, P.Eng.

Room: ACEB 3470

Email: [mnaish@uwo.ca](mailto:mnaish@uwo.ca)

**PREREQUISITES:**

MME 2213A/B or MME 2234A/B, and MME 3374A/B (or the former ECE 3374A/B), or (ECE 2233A/B and ECE 2277A/B), or (ECE 2238A/B and ECE 2277A/B).

Unless you have either the requisites for this course or written special permission from your Dean to enroll in it, you will be removed from this course and it will be deleted from your record. This decision may not be appealed. You will receive no adjustment to your fees in the event that you are dropped from a course for failing to have the necessary prerequisites.

**ACCREDITATION  
UNITS:**

Engineering Science = 40%, Engineering Design = 60%

**TOPICS AND  
LEARNING  
OBJECTIVES:**

Mechatronic system design strives to integrate mechanical, electronic, optical, and computer technologies in order to create “optimal” products and processes. Basic concepts and fundamental principles will be reviewed in this course. Students will develop the knowledge and skills necessary to adopt an interdisciplinary approach to mechatronic system design through the lectures, hands-on laboratory assignments, and a term design project. The table below summarizes the course learning outcomes.

The Mechanical and Materials Engineering Program has been accredited by Canadian Engineering Accreditation Board (CEAB) of Engineers Canada. Accredited programs provide the academic requirements for licensure as a professional engineer in Canada. Western Engineering has defined indicators of the 12 Graduate Attributes (GAs) that the CEAB expects graduating engineering students to demonstrate. The connections between course learning outcomes and [Western Engineering’s GA Indicators](#) are identified below, with those in bold indicating the ones to be measured and reported annually.

Course Topics and Specific Learning Outcomes	CEAB Graduate Attribute Indicators
<b>1. Mechatronic System Design</b> The concepts of mechatronic systems, their primary components, and how they are designed in a systematic manner will be introduced at the beginning and reinforced throughout the course. In the end, students will be able to:	
a Identify and explain the components and characteristics of a mechatronic system	KB4
b Explain how intelligent products and systems are developed	KB4
c Expand engineering design knowledge to encompass mechatronic design principles	KB4
d Explain the role of sensors, actuators, control, and machine intelligence in product performance	KB4
e Apply product design and systems engineering concepts to the development of a mechatronic system	D1, D2, D3, D4
f Adapt mechanical designs into mechatronic designs	D1, D2, D3, D4

<p><b>2. Microcontrollers</b></p> <p>Microcontrollers are a key component of mechatronic systems, providing control and intelligence functionality. The structure of microcontrollers, how they are programmed, and how they are interfaced with external devices will be introduced and expanded upon throughout the course. In the end, students will be able to:</p> <ul style="list-style-type: none"> <li>a Understand the architecture and organization of microcontrollers</li> <li>b Discuss how to integrate a programmable device into a smart product</li> <li>c Demonstrate the programming skills needed to write, modify, and implement code for an ESP32 microcontroller</li> <li>d Understand and demonstrate how to interface with analog and digital peripheral devices</li> <li>e Design, construct, and evaluate functional mechatronic systems</li> </ul>	KB4 PA2 PA2, ET2, ET3 KB4, PA2, ET2, ET3 D2, <b>D3</b> , <b>D4</b>
<p><b>3. Sensors and Actuators</b></p> <p>Sensors provide critical information to a mechatronic system and actuators allow a system to affect the environment. At the end of this section, students will be able to:</p> <ul style="list-style-type: none"> <li>a Explain the operating characteristics and use of electrical and optical sensors</li> <li>b Explain the operating characteristics and use of DC electromechanical actuators</li> <li>c Select and integrate suitable sensors and actuators into a mechatronic design</li> <li>d Construct and evaluate simple electronic circuits to interface with sensors and actuators</li> </ul>	KB4  KB4  PA1, PA2, PA3 ET2, ET3
<p><b>4. Communication Systems</b></p> <p>Several methods of wireless communications will be introduced. At the end of this section, students will be able to:</p> <ul style="list-style-type: none"> <li>a Explain the operating principles of wireless communication</li> <li>b Assess simple wireless electronic (optical and radio-frequency) communication systems</li> <li>c Implement wireless communication methods with a microcontroller</li> </ul>	KB4 KB4 ET2, ET3
<p><b>5. Machine Control and Intelligence</b></p> <p>Microcontrollers afford the opportunity to embed human knowledge into the operation of devices and enable them to behave in an intelligent manner. At the end of this section, students will be able to:</p> <ul style="list-style-type: none"> <li>a Explain how human knowledge can be represented by a digital computer</li> <li>b Illustrate how human-like control and intelligence can be integrated into a mechatronic system using knowledge based systems, fuzzy logic, and artificial neural networks</li> </ul>	KB4 KB4

**CONTACT HOURS:**

Timetable information is available at <https://draftmyschedule.uwo.ca/>

**TEXT:**

**Optional:** W. Bolton, *Mechatronics: Electronic Control Systems in Mechanical and Electrical Engineering*, 7<sup>th</sup> Edition, Pearson Education, 2018. ISBN # 978-1292250977

**Note:** Students must purchase an *MME 4487 Lab Kit* through Western Engineering Stores: <https://estore.eng.uwo.ca>. The cost of a kit is \$80.

**REFERENCES:**

Assigned Readings

**UNITS:**

SI

**EVALUATION:**

The course grade will be determined as follows:

Evaluation Format	Weight	Effort Type	Assigned	Due	CEAB GAs ASSESSED
Labs (5 total)	25%	Individual	Week of Sep. 8, Sep. 15, Sep. 22, Oct. 6, Oct. 13	Week of Sep. 8, Sep. 22, Oct. 6, Oct. 20, Oct. 27	
Milestones (4 total)	20%	Team	Sep. 11	Oct. 27, Nov. 10, Nov. 21, Nov. 28	D3, D4
In-class Test	10%	Individual	Nov. 13	Nov. 13	
Showcase	5%	Team	Sep. 11	Dec. 4	
Prototype	10%	Team	Sep. 11	Dec. 9	
Design Report	30%	Team	Sep. 11	Dec. 9	D3, D4

The dates listed above are **tentative** and may be adjusted if needed. Marks will be assigned on the basis of method of analysis and presentation, correctness of solution, clarity and neatness.

**COURSE POLICIES:**

All work submitted must be of professional quality. Material that is handed in dirty, illegible, or disorganized will be returned to the student for resubmission and the late submission penalty will take effect. An additional penalty of 10% may be deducted for poor grammar, incoherence, or lack of flow in the written reports.

Laboratory sessions:

- Attendance at all laboratory sessions is mandatory. Absence from any session, or a portion of a session, without permission will result in a zero for the corresponding lab. The teaching assistants will maintain a record of your attendance. Students who arrive 20 minutes or more after the scheduled lab time without a legitimate reason, leave the lab early without permission from the TA, or miss the lab without a legitimate reason will receive a zero for the corresponding lab.
- Students who miss a lab with academic consideration are required to contact the course instructor for further instructions. Failure to do so will result in a zero for that lab.
- Except where indicated, the laboratory exercises are to be completed individually. The lab deliverables will be assessed as a combination of in-lab demonstrations and materials submitted online. In-lab demonstrations must take place by the end of the designated lab period. Related materials submitted online are due by midnight of the same day.
- The laboratory assignments all involve modifying and writing microcontroller code. While Generative AI may be used as a tool to help debug code, **how and where it is used must be clearly indicated**. It is expected that students are the authors of the majority of the code submitted. *Furthermore, to verify effective use of AI in a submitted lab, students may be selected randomly for an interview pertaining to their code and other aspects of their lab.* If irresponsible use of GenAI tools is determined by the instructor, the deliverable will receive a grade of zero. Repeated offences may result in further academic offence penalties.
- Lab submissions may be submitted up to 48 hours after the due date without incurring academic penalty. **No further extension will be granted and submissions later than 48 hours past the deadline will not be accepted.**
- A minimum mark of 50% in each laboratory exercise, with a minimum average of 60% across all laboratory exercises is required to pass the course.

In-class test:

- If a student misses the test, the test will not be rescheduled regardless of the circumstances for which the test was missed.
- Since the test is the only proctored assessment of an individual student's understanding of the course material, students seeking academic consideration for the test will be required to provide formal supporting documentation (i.e., the test is a designated assessment and a self-reported absence cannot be used). Students who are granted academic consideration for this assessment will be provided with an opportunity to complete an oral examination on the test subject matter.

- Students should review the policy for [Accommodation for Religious Holidays](#). Where a student will be unable to write the in-class test due to a conflicting religious holiday, they should inform the instructors as soon as possible but not later than one week prior to the test.
- Missing the test without academic consideration will result in a grade of zero for the test.

Project:

- Project teams will be formed by the third week of the term. Students must form a team with others in the same lab section.
- Since project deliverables are a team effort, it is expected that the team has sufficient capacity to accommodate the illness or absence of one or more team members. In other words, there will not be any academic consideration given for group submissions. If extenuating circumstances affect all team members, then the team may choose to submit milestone deliverables up to 48 hours after the due date without incurring academic penalty.
- The default assumption is that everyone contributes equally to the team effort, and hence all students will receive the same grade for the project components. Each student will be asked to specify the contribution made by each member of the team, including themselves. Team grades may be adjusted by up to 50% for each student based on self and peer evaluation. Students who provide limited contributions to the team effort may receive a failing project grade, irrespective of the how well the rest of the team does.
- Generative AI may be used as a tool to help generate ideas and edit portions of the project milestones and project report submissions; however, it is expected that students are the primary authors of these deliverables and are responsible for the content. **All use of Generative AI in any project deliverable must be fully and clearly disclosed.** In particular, it should be clear how students assessed the validity and accuracy of all generated content, along with any corrections that were necessary. *Furthermore, to verify effective use of AI in a submitted course deliverable, students may be selected randomly for an interview pertaining to the deliverable submitted by the design team.* If irresponsible use of GenAI tools is determined by the instructor, the deliverable will receive a grade of zero. Repeated offences may result in further academic offence penalties.
- A minimum of 60% must be obtained on the project in order to pass the course.

Tips for success:

- You are responsible for all material posted online and discussed in class. Class attendance is highly encouraged. Attention to the events happening in each lecture will ensure your understanding of the topics and will allow you to gain the most from the course.
- While every student works at a different level, it is the effort placed in each requirement that ultimately leads to success. Your interest in the course, participation in class by asking relevant questions, and talking to the instructor during office hours will all contribute to your successful completion of the assignments, labs, test, and project. Such behavior is highly encouraged.
- It is your responsibility to determine what is required of you. If you miss a lecture, it is your responsibility to find out what was discussed and what instructions were given regarding assignments, laboratory sessions, or exams.
- Plan to arrive to class and to the lab a few minutes early. Lectures will start promptly, and immediate attention will be required from the start.

**LATE SUBMISSION  
POLICY:**

This course employs flexible deadlines for labs and project milestone submissions. The deadlines can be found above in the course outline. For each deliverable, students are expected to submit the assignment by the deadline listed. Should illness or extenuating circumstances arise, students are permitted to submit their deliverable up to 48 hours past the deadline without academic penalty. **As flexible deadlines are used in this course, requests for academic consideration will not be granted.** If you have a long-term academic consideration or an accommodation for disability that allows greater flexibility than provided here, please reach out to Prof. Naish at least one week prior to the posted deadline.

**CONSULTATION  
HOURS:**

By appointment

## USE OF GENERATIVE ARTIFICIAL INTELLIGENCE:

As stated above in the Course Policies section, the use of generative artificial intelligence (AI) tools/software/apps is permitted in specific situations. It is expected that students will develop their understanding of microcontroller programming and can write functional software without assistance. Further, students are expected to be able to conduct design work on their own and write technical reports in their own words. In general, generative AI must not be treated as a substitute for a student's innate ability to write code, design, or write reports. Apart from isolated words, all use of generative AI must be clearly indicated. Further, any generated content must be carefully reviewed for correctness.

## FACULTY OF ENGINEERING POLICIES:

Students must familiarize themselves with the policies of the Faculty of Engineering. The most up-to-date version of these policies may be found at:

<https://www.eng.uwo.ca/electrical/pdf/2025-UG-Policy-and-Procedures.pdf>.

### I. Absence/Late Accommodation Policy

- Students must familiarize themselves with the University Policy on Academic Consideration – Undergraduate Students in First Entry Programs posted on the Academic Calendar: [https://www.uwo.ca/univsec/pdf/academic\\_policies/appeals/academic\\_consideration\\_Sep24.pdf](https://www.uwo.ca/univsec/pdf/academic_policies/appeals/academic_consideration_Sep24.pdf)  
This policy does not apply to requests for Academic Consideration submitted for attempted or completed work, whether online or in person. The policy also does not apply to students experiencing longer-term impacts on their academic responsibilities. These students should consult [Accessible Education](#).
- Students missing a test/assignment/lab or examination will report the absence by submitting Academic Consideration Request form through [STUDENT ABSENCE PORTAL](#).
- All requests for Academic Consideration must be made within 48 hours after the assessment date or submission deadline. All Academic Consideration requests must include supporting documentation; however, recognizing that formal documentation may not be available in some extenuating circumstances, the policy allows students to make one Academic Consideration request without supporting documentation in this course. However, the following assessment is excluded from this, and therefore always requires formal supporting documentation:
  - a. In-class test.
- If a student mistakenly submits their one allowed Academic Consideration request without supporting documentation for the assessments listed above that do not require academic consideration, the request cannot be recalled and reapplied. This privilege is forfeited.
- **Requests without supporting documentation are limited to one per term per course.**
- An undocumented absence is only valid for a 24-hour period, from midnight on the day specified to midnight of the following day. An appropriate use of an undocumented absence would be for an in-class assessment that takes place that day. Where the time given to complete the assessment is longer than 24 hours, an undocumented absence will not cover a student for the full time given to complete the assessment, and flexibility considerations in submitting the assessment will override the undocumented absence.
- This course employs flexible deadlines for assignments. The assignment deadlines can be found above in the course outline. *For each assignment, students are expected to submit the assignment by the deadline listed.*  
Should illness or extenuating circumstances arise, students are permitted to submit their assignment up to 48 hours past the deadline without academic penalty. Assessments submitted more than 48 hours past the deadline will not be accepted.
- NOTE: Forged notes and certificates will be dealt with severely. To submit a forged document is a scholastic offence (see below).
- It is the student's responsibility to check the date, time and location of the [Special Examination](#).

### II. Religious Accommodation

When scheduling unavoidably conflicts with religious holidays, which (a) require an absence from the University or (b) prohibit or require certain activities (i.e., activities that would make it impossible for the student to satisfy the academic requirements scheduled on the day(s)

involved), no student will be penalized for absence because of religious reasons, and alternative means will be sought for satisfying the academic requirements involved. If a suitable arrangement cannot be worked out between the student and instructor involved, they should consult the appropriate Department Chair and, if necessary, the student's Dean.

It is the responsibility of such students to inform themselves concerning the work done in classes from which they are absent and to take appropriate action.

### III. Academic Integrity

In the Faculty of Engineering, we encourage students to create a culture of honesty, trust, fairness, respect, responsibility, and courage, befitting the professional degree you are pursuing.

Please visit [Academic Integrity Western Engineering for more information](#)

### IV. Academic Offences

Plagiarism means using another's work without giving credit. The university has rules against plagiarism and other scholastic offences. Western Engineering has a zero-tolerance policy on plagiarism. The minimum penalty is zero on the course work and a repeat offence will earn you zero on the course. A third offence may lead to expulsion from the university.

[Scholastic Discipline for Undergraduate Students & Cheating, Plagiarism and Unauthorized Collaboration: What Students Need to Know](#)

Students must write their reports, essays and assignments in their own words. Whenever students take an idea or a passage from another author, they must acknowledge their debt both by using quotation marks where appropriate and by proper referencing such as footnotes or citations. University policy states that cheating, including plagiarism, is a scholastic offence. The commission of a scholastic offence is attended by academic penalties, which might include expulsion from the program. If you are caught cheating, there will be no second warning.

All required papers may be subject to submission for textual similarity review to commercial plagiarism detection software under license to the University for the detection of plagiarism. All papers submitted will be included as source documents on the reference database for the purpose of detecting plagiarism of papers subsequently submitted to the system. Use of the service is subject to the licensing agreement, currently between the University of Western Ontario and Turnitin.com (<http://www.turnitin.com>). Scholastic offences are taken seriously and students are directed to read the appropriate policy, specifically, the definition of what constitutes a Scholastic Offence, in the relevant section of the Academic Handbook: [http://www.uwo.ca/univsec/pdf/academic\\_policies/appeals/scholastic\\_discipline\\_undergrad.pdf](http://www.uwo.ca/univsec/pdf/academic_policies/appeals/scholastic_discipline_undergrad.pdf)

### V. Faculty of Engineering AI Policy

The use of generative Artificial intelligence (GenAI) tools won't be discouraged in the Faculty of Engineering. As we pride ourselves on building the future we can't hide from the use of GenAI tools to contribute to the understanding of the course materials. Please refer to the specific policies for the use of GenAI in the course outline.

**GenAI tool use won't be permitted in any type of examination or other assessments where the faculty have prohibited their use.** If use of GenAI tools is detected by the instructor in these instances, academic offences penalties might be imposed against the student.

### VI. Accessibility

Western is committed to achieving barrier free accessibility for persons with disabilities studying, visiting and working at Western. As part of this commitment, there are a variety of services, groups and committees on campus devoted to promoting accessibility and to ensuring that individuals have equitable access to services and facilities. To help provide the best experience to all members of the campus community, please visit the [Accessibility Western University](#) for information on accessibility-related resources available at Western.

Students with disabilities may arrange for academic accommodation at Western. For a more detailed explanation, please visit [Academic Support & Engagement-Academic Accommodation](#).

## VII. Inclusivity, Diversity, and Respect

The Faculty of Engineering at Western University is committed to creating equitable and inclusive learning environments that value diverse perspectives and experiences. We recognize that university courses often marginalize students based on social identity characteristics such as, but not limited to, Indigeneity, race, ethnicity, nationality, ability, gender identity, gender expression, sexuality, age, language, religion, and socioeconomic status. Understanding this, we strive to facilitate equitable experiences and inclusion within the classroom by respecting and integrating multiple ways of knowing, being, and doing. Please visit the [Office of Equity, Diversity and Inclusion](#).

## VIII. Health and Well-Being

- [Health & Wellness Services – Students](#) - Offers appointment-based medical clinic for all registered part-time and full-time students.
- [Mental Health Support](#) - Provides professional and confidential services, free of charge, to students needing assistance to meet their personal, social and academic goals. Services include consultation, referral, groups and workshops, as well as brief, change-oriented psychotherapy.
- [Crisis Support](#) - For immediate assistance, please visit Thames Hall Room 2170 or call 519-661-3030. The crisis clinic operates between 11:00 am - 4:30 pm. For after-hours crisis support, click [here](#).
- [Gender-Based Violence and Survivor Support](#) - “Western is committed to reducing incidents of gender-based and sexual violence (GBSV) and providing compassionate support to anyone who is going through or has gone through these traumatic events. If you are experiencing or have experienced GBSV (either recently or in the past), you will find information about support services for survivors, including emergency contacts at the following website:  
[https://www.uwo.ca/health/student\\_support/survivor\\_support/gethelp.html](https://www.uwo.ca/health/student_support/survivor_support/gethelp.html) To connect with a case manager or set up an appointment, please contact [support@uwo.ca](mailto:support@uwo.ca).
